[Portfolio](#)

I am a product designer with 3 years of experience designing AI-powered SaaS products end to end, with a focus on B2B and B2B2C platforms. As the sole designer across multiple projects, I manage everything from research through UX/UI to shipped MVP. I bring a background in occupational therapy, adding a behavior-driven, human-centered lens to products by combining empathy with research-backed decision-making.

EXPERIENCE

Product Designer · MindCET 2024–2026

Sole product designer on three B2C / B2B2C AI-powered EdTech platforms developed in parallel, owning research, UX/UI, and product strategy end to end.

- Designed a SaaS platform end to end – multiple interfaces for different user types across desktop and mobile – for an international network; shipped the MVP and delivered it to the client.
- Designed and led an AI-driven experiential learning platform, including user pilots, delivering above-target engagement results and strong product-market-fit signals.
- Redesigned the core build experience of an AI "vibe coding" platform, grounded in post-pilot interviews and usability testing to reduce drop-off at the product's most critical stage.

Product Designer · Freelance 2023–2024

Designed a B2B SaaS AI platform for e-commerce sellers, establishing the core UX/UI infrastructure from early demo to a refined, high-fidelity product.

Occupational Therapist 2013–2022

Specialized in behavioral analysis, empathetic user interviewing, and driving data-backed decisions to translate complex human needs into actionable plans.

VOLUNTEERING

2013–Present

Lead a non-profit community project for event-design equipment lending.
