[Portfolio](#)

I am a product designer with 3 years of experience designing AI-powered SaaS products end to end, with a focus on B2B and B2B2C platforms. As the sole designer across multiple projects, I manage the entire lifecycle from initial research to final production. I bring a background in occupational therapy, adding a behavior-driven, human-centered lens to products by combining empathy with research-backed decision-making.

EXPERIENCE

Product Designer · MindCET 2024–2026

Led end-to-end research, UX/UI, and product strategy for three B2C/B2B2C AI platforms developed in parallel, delivering multiple tailored interfaces for different user types across desktop and mobile.

- Led the research phase through interviews, surveys, usability testing, and insight synthesis to identify user needs and shape product direction.
- Defined core user flows and translated user needs, product goals, and technological constraints into clear UX structure
- Led the UI design of the product and established its design guidelines. Collaborated closely with product, development to move ideas from concept to a coherent product experience.
- Applied AI tools throughout the design process and contributed to prompt engineering as part of the AI based product experience.

Product Designer · Freelance 2023–2024

Designed a B2B SaaS AI platform for e-commerce sellers, establishing the core UX/UI infrastructure from early demo to a refined, high-fidelity product.

Occupational Therapist 2013–2022

Specialized in behavioral analysis, empathetic user interviewing, and driving data-backed decisions to translate complex human needs into actionable plans.

VOLUNTEERING

2013–Present

Lead a non-profit community project for event-design equipment lending.
